

1 35. (As filed) A device as in claim 34, wherein the advancable means has a
2 pre-formed tip which deflects laterally as it is advanced from the catheter.

1 36. (Previously Amended) A device as in any of claims 33 to 35, wherein the
2 advancable means comprises a guide tube having a lumen therethrough and a penetrating element
3 removably received in the lumen and extending from a distal tip of the guide tube, wherein the
4 penetrating element can be withdrawn from the guide tube after the guide tube has been placed
5 between the access penetrations to leave the guide tube lumen as the filament path.

1 37. (As filed) A device as in claim 36, wherein the penetrating element is a
2 stylet.

1 38. (As filed) A device as in any of claims 33 to 35, further comprising an
2 expandable anchor disposed over at least a portion of the catheter.

1 42. (As filed) A device for positioning a filament in a body lumen, said device
2 comprising:

3 a catheter which can be introduced through a first access penetration into the body
4 lumen, said catheter having a proximal end, a distal end, and a lumen therethrough;

5 a guide tube reciprocatably disposed in the lumen of the catheter so that the guide
6 tube can be advanced from the distal end of the catheter, said guide tube having a proximal end, a
7 distal end, and a lumen therethrough, wherein the distal end of the guide tube is deflectable; and

8 a penetrating element reciprocatably mounted in the lumen of the guide tube so
9 that the penetrating element can be advanced from the distal end of the guide tube to penetrate a
10 luminal wall in a direction determined by deflection of the distal end of the guide tube.

1 43. (As filed) A device as in claim 42, wherein the guide tube has a pre-
2 formed tip which deflects laterally as the guide tube is advanced from the catheter.

1 44. (As filed) A device as in claim 42, wherein the penetrating element is a
2 stylet.

1 45. (As filed) A device as in any of claims 42 to 44, further comprising an
2 expandable anchor disposed over at least a portion of the catheter.
